

HOME SAFETY

# 01

## FIRE SAFETY

---

As your landlord we have a legal duty to ensure at least one smoke alarm is equipped on each storey of your home where there is a room used as living accommodation.

To reduce your chances of being injured or even killed in a fire at home, you should ensure that you have at least one working smoke alarm in each storey of your property where there is a room used as living accommodation. If you do not have a smoke alarm, you should contact us on **0151 709 6878**. You can also contact Merseyside Fire and Rescue Service on **0800 731 5958** to arrange a home fire safety check.

Heat detectors may also be installed in your home, usually within your kitchen.

You should test your smoke alarm or heat detector weekly

to make sure they are working properly, they do not work, you may need to replace the battery.

Standard battery operated alarms will need batteries replacing every year.

If a smoke alarm or heat detector is faulty, you should contact us, so we can repair or replace it. If they start to bleep on a regular basis, you need to replace the battery immediately.

Never disconnect or take the batteries out of a smoke alarm or heat detector. If fitting your own alarm or detector, follow the manufacturer's instructions.

Smoke alarm or heat detectors designed specifically for people who are deaf or hard of hearing are available, contact the Merseyside Fire and Rescue Service on **0800 731 5958** to discuss your options.

## WHAT TO DO IF THERE IS A FIRE

Domestic house or flat  
(i.e. not contained within  
a purpose-built block of flats)

*In the event of a fire within your house or flat, you should:*

- Keep calm and act quickly, get everyone out as soon as possible.
- Don't waste time investigating what's happened or rescuing valuables.
- If there's smoke, keep low where the air is clearer.
- Before you open a door check if it's warm. If it is, don't open it - fire is on the other side.
- Once you are outside the building, call the fire and rescue service by dialling 999.

High-rise blocks, low-rise blocks, sheltered schemes and purpose-built blocks of flats

*In the event of a fire in your flat:*

- Alert everyone in your flat. Close the door to the room where the fire is located.
- Ensure everyone in the flat leaves as quickly as possible. Close the front door to your flat.
- Make your way out of the building, using the common escape route. Never use a lift in the event of a fire.
- If your planned escape route is too dangerous because stairs and hallways are full of smoke, call 999 and stay in the safest room. Keep doors closed and use towels or bedding to block the smoke at the bottom of the door.
- Once you are outside the building, call the fire and rescue service by dialling 999.

Purpose-built blocks of flats are usually built to give you some protection from fire. This means that walls, floors and doors can hold back flames and smoke for 30 to 60 minutes.

NEVER ASSUME ANYONE ELSE  
HAS CALLED 999  
**MAKE THE CALL YOURSELF**

### ***In the event of a fire elsewhere in the building:***

*IMPORTANT NOTE: Where a 'stay put' Policy is in place, we would emphasise that if you are in any doubt that it is safe to remain in your flat and, provided it is safe to use the common escape routes, then you should leave the building as quickly as possible.*

- The building if a purpose-built block of flats is designed to contain a fire and allow you to remain in your flat in relative safety if the fire is in another flat or elsewhere in the building.
- If your flat is not affected by fire, you will be safe to remain in your flat.
- You will be safe to stay in your flat - unless your flat subsequently becomes affected by fire and smoke or you are directed to leave by the fire and rescue service.

- If your planned escape route is too dangerous because stairs and hallways are full of smoke, call **999** and stay in the safest room. Keep doors closed and use towels or bedding to block the smoke at the bottom of the door.
- If your flat becomes affected by fire - or you are in any doubt and it is safe to use the common escape routes - leave the building as quickly as possible. Do not use the lifts. Once you are outside the building, call the fire and rescue service by dialling **999**.

### **CALLING THE FIRE AND RESCUE SERVICE:**

Dial 999. When the operator answers, give your telephone number and ask for fire.

When the fire and rescue service answers, give them your address and the location of the fire.

#### **IMPORTANT NOTE:**

Where a 'stay safe' policy is in place, we would emphasise that if you are in any doubt that it is safe to remain in your flat and, provided it is safe to use the common escape routes, then you should leave the building as quickly as possible.

## FIRE DOORS

You should never disconnect door closers. The door closer is a critical fire safety device. Please contact us if you have any problems with door closers in your building. **Do not wedge fire doors open.**

We are required to carry out regular checks of flat entrance fire doors and fire doors in the communal areas of purpose-built blocks of flats. This is to ensure they remain damage free and will work correctly in the event of a fire. Please assist us by allowing our colleagues and contractors to access your property to carry out these checks.

## ELECTRICAL SAFETY

### Do's and don'ts

- Do buy electrical appliances and chargers from a reputable source and always check for a British or European safety mark.
- Do check your sockets regularly - if you see burn marks or they feel hot, get them checked by a qualified electrician, or contact us.
- Do check the electrical current rating of an electrical adaptor before you plug appliances in; make sure that the total current used does not exceed the adaptor's rating. For advice on how to do this visit the Electrical Safety Council's website [esc.org.uk/public](http://esc.org.uk/public).
- Do regularly check for frayed or worn cables and wires. Check to see if the cable is fastened securely to the plug and check the socket for scorch marks. You should always carry out these checks before you use an appliance.

- Do follow the manufacturer's instructions if you need to change a fuse.
- Do switch off appliances at the socket when not in use. Switch off appliances when you go to bed or when you go out unless they are designed to be left on (*e.g. fridge freezer*).
- Do keep electrical appliances clean and in good working order. Look out for fuses that blow, circuit-breakers that trip for no obvious reason and flickering lights.
- Don't overload plug sockets or adaptors, an extension lead or adaptor will have a limit to 13amps, so be careful not to overload them and try to keep to one plug per socket.
- Don't use electrical appliances near water, and never touch electrical appliances with wet hands.
- Don't use water on an electric fire. Pull the plug out or switch the power off if it is safe to do so.

- Don't put electric heaters near curtains or furniture and don't dry clothes on them or cover the air vents on heaters.
- Don't trail flexible cables under carpets or rugs.
- For more information in relation to electrical safety visit the Electrical Safety Council's website [esc.org.uk/public](http://esc.org.uk/public).

## COOKING

- Take extra care if you need to leave the kitchen whilst cooking, take pans off the heat or turn them down to avoid risk.
- Take care if you're wearing loose clothing - they can easily catch fire. Also, you should keep tea towels and cloths away from the cooker and hob.
- Spark devices are safer than matches or lighters to light gas cookers, because they don't have a naked flame.
- Double check the cooker is off when you've finished cooking

- Invest in a fire blanket.
- Keep the oven, hob and grill clean and in good working order. A build-up of fat and grease can ignite a fire.
- Don't put anything metal in a microwave.
- Take care when cooking with hot oil - it sets alight easily.
- If cooking oil starts to smoke - it's too hot. Turn off the heat and leave it to cool.
- Use a thermostat controlled electric deep fat fryer - they can't overheat.
- Never throw water over a chip-pan fire.

## SMOKING

- Never smoke in bed.
- Use a proper ashtray and make sure it cannot tip over and is made of a material that won't burn.
- Never leave a lit cigarette, cigar or pipe unattended.

- Take extra care if you smoke when you're tired, taking prescription drugs or if you have been drinking.
- Keep matches and lighters out of children's reach.

## MOBILITY SCOOTERS

### Storage

- Mobility scooters must not be stored in the communal areas, including hallways, stairwells, corridors and landings.
- It is possible for mobility scooters to be stored inside residents own homes but it is the residents responsibility to first ensure that there is sufficient space to store it safely, and should not block any fire escape routes.
- The storage of a mobility scooter external to any communal building must be in such a manner that it does not cause any health and safety issues to any other residents, visitors or threaten the fabric of the building.

### Recharging/maintenance

- Mobility scooters must not be recharged in the communal areas, they should be recharged safely within the residents own home, and should be charged according to the manufacturer's instructions. Recharging should only be carried out during day time hours, and not overnight.
- We do not currently provide charging facilities for mobility scooters.
- Residents must ensure that the scooter is serviced and maintained regularly, and this is the responsibility of the scooter owner.

### General needs

- Mobility scooters will only be allowed where a resident can safely store and charge the scooter without hindering safe escape from the property in the case of fire.

## COMPRESSED GAS (E.G. PROPANE, BUTANE OR OXYGEN)

Unless for medical reasons, you must not use, permit to be used or store compressed gas within your home or any communal areas.

If you are required to use and store compressed gas for medical reasons (i.e. oxygen), you must inform the Merseyside Fire and Rescue Service on **0800 731 5958** who will arrange to carry out a home fire safety check.

Always refer to the manufacturer's instructions when using or storing compressed gas.

# 02

## LEGIONELLA

---

### What is legionnaires' disease?

Legionnaires' disease is potentially fatal and is caused by legionella bacteria. Infection is caused by breathing in small droplets of water contaminated by the bacteria. The disease cannot be passed from one person to another.

Everyone is potentially at risk of infection but some people are at higher risk - e.g. those over 45 years of age, smokers and heavy drinkers, those suffering from chronic respiratory or kidney disease and people whose immune system is impaired.

### Where are legionella bacteria found?

Legionella bacteria are common in natural water courses such as rivers and ponds. Since the bacteria are widespread in the environment, they may contaminate and grow in other water systems such as hot and cold water services. They are killed by high temperatures.

### How do people get it?

the agent that causes Legionnaires' disease is a bacterium called Legionella pneumophila. People catch Legionnaires' disease by inhaling small droplets of water suspended in the air, which contain the bacteria.

### What are the symptoms?

the symptoms are similar to those of flu, i.e. high temperature, fever and chills, cough, muscle pains and headache. In a severe case, there may also be pneumonia, and occasionally diarrhoea, as well as signs of mental confusion. Legionnaires' disease is not known to spread from person to person.

### What do i do if i think i have contracted legionnaires' disease?

If you develop these symptoms and you are worried that it might be Legionnaires' disease, see your doctor. If you are diagnosed with Legionnaires' disease please contact us on 0151 709 6878.

### What can i do to reduce the risk of legionella?

We recommend you run all your taps and your shower for a couple of minutes each week to prevent the build up of harmful bacteria. We also recommend you clean your shower head every month to prevent the build-up of limescale.

## GAS SAFETY

---

As a landlord we have a legal duty to ensure that all gas appliances, fittings and flues owned by Pine Court Housing Association provided for your use are safe. This includes things like central heating boilers and gas fires.

We are also responsible for ensuring a carbon monoxide alarm is equipped in any room used as living accommodation which contains a fixed combustion appliance (excluding gas cookers).

To do this we must carry out an annual gas safety check or gas service using registered Gas Safe engineers. The annual gas safety check will include testing of all required gas appliances, pipe work, flues and smoke alarms in your home.

We will provide you with a copy of your gas safety certificate within 28 days of the check being completed. We will notify you in writing two months before your gas safety check is due to expire and we will arrange an appointment to complete the gas safety check.

### Carbon monoxide detectors in your home

Following recent changes to The Smoke and Carbon Monoxide Alarm Regulations, we must ensure you have a working carbon monoxide alarm in any room used as living accommodation, which contains a fixed combustion appliance (excluding gas cookers). If you haven't got a carbon monoxide alarm in these locations, you should contact us immediately and we will arrange an installation.

Please note this excludes properties that are electric only, or where a fixed combustion appliance is not situated in a room used as living accommodation.

### We are committed to ensuring:

- a carbon monoxide alarm is provided in any room used as living accommodation which contains a fixed combustion appliance (excluding gas cookers)
- carbon monoxide detectors are repaired or replaced once we are informed and find they are faulty'

### What to do if you smell gas or suspect carbon monoxide?

If you smell gas, or suspect there is a gas leak you should:

- Turn off the appliance.
- Turn off the gas supply at the meter (unless the meter is located in a cellar or basement, in which case you should

evacuate immediately).

- Not use or switch any electrical appliances on or off.
- Not smoke.
- Not use matches or anything that has a naked flame.
- Open doors and windows to allow the gas to disperse.
- Not use a mobile phone anywhere near the leak.
- Check to see if a gas tap has been accidentally left on or if a pilot light has gone out.
- Call the National Grid immediately on **0800 111 999**

If you have a faulty gas appliance, it can be dangerous and produce carbon monoxide gas.

Any one of the following could be a sign that there is carbon monoxide in your home:

- The flame on your cooker should be crisp and blue. Lazy yellow or orange flames mean you need to get your cooker checked.
- Dark staining on or around gas appliances.
- Pilot lights that frequently blow out.
- Increased condensation inside windows.

Anyone suffering from headaches, dizziness, nausea, breathlessness or who collapses or loses consciousness where gas is present, should seek medical advice immediately.

### Your responsibilities

You should test your carbon monoxide alarm weekly to make sure it is working properly. If your carbon monoxide alarm is faulty, you should contact us so we can repair or replace it.

You must allow us access to your home to complete your annual gas safety check. If you do not allow us access you will be in breach of your tenancy agreement and we will take legal action, this may result in you losing your home.

If you employ anyone to carry out gas work in your home, you must ensure they are a Gas Safety Registered engineer.

You must never attempt to do any gas related work or repairs yourself. Not only could you be breaking the law, but any work you carry out could be life threatening for you and your neighbours.

### What if you have gas but no gas appliances?

If you have a gas supply meter fitted in your property, but do not have any gas appliances, we still need to inspect the pipework inside your home.

### What if an appliance fails the safety check?

The Gas Safety Record will contain details of any problems found at the time of the inspection, and any action that has been taken.

If an appliance fails the safety check, it may be necessary to disconnect it. Our engineer will make the appliance safe whilst on site in this circumstance. We will then contact you to discuss and agree any further actions and when we will do them.

If one of the appliances that you own is faulty we will disconnect it and advise you to seek help from a qualified Gas Safe Registered engineer.

### Gas safety tips

- Make sure you know where your gas meter is located and how to turn off the gas supply in the event of an emergency.
- Never cover an appliance such as a boiler or gas fire or block the air vents.
- Never block or obstruct any fixed ventilation grilles or airbricks.
- Never block or cover outside flues.
- Never fit draught exclusion strips to doors of a room that contains a gas appliance.
- Never use a gas appliance if you think it's not working properly and never cover gas appliances.

# 04

## ASBESTOS

**Asbestos is not something to be worried about but you do need to be aware of the risks it could present if it is not safely managed.**

### What is asbestos?

Asbestos is a naturally occurring mineral that has been used for many years in a variety of different building products due to its thermal heat retention, sound proofing and fire retardant qualities. Asbestos can break into microscopic fibres if broken or disturbed and these fibres can be hazardous to health if inhaled.

Asbestos is generally not a problem if the products containing asbestos are in fair/good condition and remain undisturbed. However, if these products are damaged, broken or abraded there is the risk that asbestos fibres may become airborne and could be inhaled.

### How likely is it to be in my home?

Asbestos was effectively banned in the United Kingdom in 1999 and is therefore not going to be found in modern buildings constructed after 1999 or in modern building products used in the UK.

There is a possibility that products containing asbestos may be in homes constructed before the year 2000. If your home was constructed before the year 2000 you must be aware of its potential presence in your home.

### What are the health risks?

exposure to asbestos, mainly from inhaling asbestos dust, can potentially result in fatal lung diseases such as Asbestosis, Lung Cancer and Mesothelioma.

The majority of these diseases are generally associated with individuals who have received heavy and occupational exposure to asbestos. However, there is still risk associated with low and sporadic exposure to the material so we must remain vigilant and take some common sense

measures to minimise our risk of inhaling the fibres.

### What to do?

If you suspect you may have disturbed asbestos or have found a suspected asbestos product and are worried that dust may be released, please leave the room where the suspect material was found, close the door to that room and contact us on **0151 709 6878**.

We will discuss and assess the situation with you and agree the best course of action.

### Where might asbestos be found in your home?

Asbestos was used extensively in a large number of building products. Photographs of some of the asbestos products commonly found in domestic properties such as houses and flats are included here.

Floor tiles

Textured coatings

Toilet cisterns

Asbestos cement products

Asbestos soffits

## What we will do

We will discuss and assess your concerns and will act accordingly. We may have records indicating where asbestos may be present within your property and can put your mind at rest or we may need to send specialists to your home to carry out further investigations to determine the best course of action. Rest assured it is our intention to keep the risk associated with asbestos in our properties to an absolute minimum.

We are working to fully identify the presence of asbestos in our properties and to minimise the risk to our tenants arising from its presence. This is an on-going programme of survey and inspections works and you may at some point in the future be asked to allow our specialist surveyors to enter your home to undertake precautionary asbestos inspection works.

However, asbestos has been used so extensively that its complete removal is impracticable to achieve in the short term and so we must put our efforts into safely managing asbestos in our properties.

## What are your responsibilities?

As a resident you will be aware that you must not undertake any significant building related works on your property without first confirming with us that it is acceptable and safe to proceed. Aggressive building works are a likely potential source of disturbance of asbestos products so we must be cautious when planning and undertaking such works.

If you have any concerns regarding asbestos or if you think you may have disturbed asbestos in your home, please contact us on **0151 709 6878**.
